

SULABH KATILA

katilasulabh@gmail.com github.com/sulabhkatila sulabhkatila.github.io linkedin.com/in/sulabhkatila
(646) 548-8328 New York, NY

EDUCATION

St. Joseph's University

B.S. (Honors) in Mathematics & Computer Science (Double Major), Minor in Data Science

May 2026

Valedictorian | GPA: 3.95/4.00

TECHNICAL SKILLS

Languages: Java, Python, C#, Swift, Bash, TypeScript, SQL

Frameworks: .NET, Pandas, NumPy, Flask, FastAPI, Scikit-learn, TensorFlow, PyTorch, Selenium, React, Express, Next.js

Tools: Unix/Linux, Git, Docker, Kubernetes, Google Cloud Platform (GCP), NodeJS, MySQL, MongoDB, Azure DevOps/Pipelines

EXPERIENCE

TransPerfect

New York, NY

Software Engineering Intern

February 2025 – May 2026

- Designed and developed custom code-analysis tool using Python to automatically update 400+ C# test methods, saving 80+ hours in manual engineering hours and ensuring 100% accuracy
- Built NLP evaluation pipelines to benchmark 5 large language models across 9 task categories, surfacing performance gaps that informed the production model selection decision
- Contributed to expansion and maintenance of Selenium and Playwright based framework that supported automated software testing
- Refactored legacy automated test suites plagued by flaky failures, cutting the false-positive rate by 65%, reducing CI/CD pipeline execution time by ~30 minutes per run, and lowering overall infrastructure resource usage

St. Joseph's University

New York, NY

Tutor

September 2023 – May 2026

- Tutored college Mathematics and Computer Science concepts to students, achieving up to 80% improvement in test scores

Summer Undergraduate Research Fellow (SURF)

June 2024 – August 2024

- Conducted intensive exploratory data analysis using Python, Pandas, NumPy, and Matplotlib, interpreting trends and visualizations to identify borough-level market dynamics and translate statistical patterns into actionable research insights
- Built and benchmarked multiple machine learning models in Scikit-learn and TensorFlow, comparing performance across architectures and reasoning through tradeoffs to identify which best captured forces driving NYC real estate prices
- Delivered an end-to-end independent research pipeline and presented findings at the university's annual research symposium

HealthStream

Remote, USA

Software Engineering Intern

September 2024 – December 2024

- Engineered a Python/Selenium automation framework from scratch, implementing Page Object Model architecture and developing testing utilities to automate regression testing for a web application serving 650,000+ monthly active users
- Configured automated test reporting, capturing failure screenshots, stack traces, and execution logs per test run to give engineers faster visibility into pass/fail trends and root causes

PROJECTS

BatMapper iOS:

June 2026 - Present

- Built an app that reconstructs 2D indoor floor plans by emitting sound signals and fusing the echo signals with user movement data
- Implemented an acoustic signal processing pipeline (bandpass filtering, cross-correlation, peak detection) to extract real-time wall distances from audio, feeding a Kalman filter and dead-reckoning based algorithm to localize the user and map the room

Smartphone Placement Detection:

May 2026 – June 2026

- Built a real-time system that detects phone's location (pocket, hand, or bag) using its motion sensors, achieving 93.4% accuracy
- Built a Swift iOS app streaming live accelerometer and gyroscope data to a Python FastAPI backend running on-the-fly feature extraction to feed to a ported MATLAB-trained AdaBoostM2 model, with predictions broadcast via WebSocket

Programming Language:

July 2024 – September 2024

- Engineered a performant Lox programming language interpreter in Rust, averaging 65% of Python 3.12.4's execution speed

Email Read Receipts Generator:

June 2024 – August 2024

- Built a Chrome extension for email read receipts backed by an HTTPS server and SMTPS client written from scratch in C, using multi-threading/multi-processing to handle concurrent requests and reduce latency by ~30%

HONORS & AWARDS

• [Winner, HackNYU 2025](#)

• Valedictorian '26, SJNY

• [Hon. Mention, CalHacks 12.0](#)

• Honor Societies (ΔΕΣ, KΓΠ)

• 8 x Dean's List, SJNY

• Esse Non Videri Scholarship, SJNY
